The Nano Neutralization™ process.

Unmatched in Performance and friendly to the Environment.

Based on patented technology developed by Cti and exclusively brought to the oils and fats industry by Desmet Ballestra, the Nano-neutralization™ process offers enhanced performance for your refining operation: improved oil refining yield, lower operating expenses, reduced environmental impact, excellent oil quality... This revolutionary new oil neutralization process, which can be easily added to existing oil refineries, is commercially proven and will offer you a quick return on investment.

What else would you expect from the global leader in Oils & Fats processing technologies?

Process increases refined oil yield by over 0.2% with significant chemical savings:

- 90% less phosphoric acid
- 30% less sodium hydroxide
- less silica or wash water consumption
